

LED UNDER CABINET LIGHTS LED PUCK LIGHTS

Under Cabinet Lights can add an Additional layer of Lighting to indoor Commercial/Residential Places

The LED Under cabinet lighting is useful in adding an additional lighting at the indoor residential and commercial applications, they are more like decorative and functional lights that can make even the corners look more beautiful and versatile. Both LED under cabinet lights and LED puck lights are important part of decorative illumination and can be used to lighten the indoor areas at homes or offices.

Both these lighting fixtures can enhance the overall home and business decor and no other lighting can replace these LEDs. These lights can be used to add accent lighting at the indoor places of your residential complexes and commercial places as well and they can highlight the counterparts, shelves, under cabinet areas, kitchens etc in an innovative and different way. Some of the advantages of installing these LED under cabinet lights and LED puck lights are mentioned below

LED UNDER CABINET LIGHTS

LED PUCK LIGHTS

Some other benefits of installing LED puck lights and LED under cabinet lights are as follows

ADDS UNIQUE DISTINCTION TO HOMES OR OFFICES

Both these LED puck lights and LED under cabinet lights can make the countertops, shelves, almirahs etc shine and elegant. With the help of these lights, any particular product or item can look more illuminated which previously was left darkened due to non-availability of traditional lights to reach over there. You can easily fix these lights at the under-cabinet or other difficult to reach places as well to make the object or item look real and visible.

HIGHER CRI

These LED under cabinet lights and LED puck lights come with higher CRI of more than 90 that is useful to lighten the objects in a real and natural way. These lights are a perfect source of illumination to lighten Kitchen Cabinets, Drawers, Pantry, Office shelves etc; by lighting specific areas of a room you don't need to light up the entire room which further reduces the need of more lights, Moreover, the rooms will remain cooler as much lesser number of lights are being installed at the indoor places.

ENERGY EFFICIENT

These small LED puck lights and LED under cabinet lights produce more amounts of lumens as compared to their traditional counterparts; under cabinet task lighting also delivers amazing lighting results by using only few watts of power only. Moreover, these lights eliminate the shadows that are created by cabinets and ceiling light fixtures and by installing these lights correctly, the shadows from countertops can be eliminated easily.
